## 8. EXPOSURE CONTROL

### 8.1 CONTROL PARAMETERS

French Green Ultra Ventilated Clay is considered as dust with no specific effect.

Components	Exposure Limits		Type of value	Source	Biological limit values	Exposure limits in air	DNEL/PNEC Values
French Green Clay	10 mg/m <sup>3</sup> (inhalable fraction)	5 mg/m <sup>3</sup> (alveolar fraction)	VME – 8h	French ministry of Labour – Circular issued by the French Ministry of Labour on May 9 <sup>th</sup> 1985.	N/A	N/A	N/A (Section 2)

For occupational limit values applicable in other countries, please refer to local Regulations.

### Recommended follow-up procedures

In order to monitor individual and environmental exposures, the recommended methods are described below:

- A decree issued on December 15<sup>th</sup> 2009 related to technical controls of occupational limit values at work and to certification standards of control agencies.
- Circular DGT N°2010-03 issued on April 13<sup>th</sup> 2010 related to chemical risk control measures at work

These standards are applied in France. If you are located in another European country or outside the EU, refer to the competent authorities.

## 8.2 APPROPRIATE TECHNICAL CONTROLS

Avoid producing dust airborne.

Opt for collective protective equipment in order to avoid creating dust: use closed processes, a well-adapted exhaust ventilation or any other process that can keep airborne concentrations below the specified exposure limits. Organizational measures can be taken such as isolating staff from dust areas for examples.

## 8.3 INDIVIDUAL PROTECTION MEASURES

Wearing of gloves is advisable.

Wear a FFP3 protection in case of dust.

Wear glasses in case of dust.
