** The substances are not expected to be part of the fruits of *Ficus carica*

None of the 26 identified allergen perfume compounds (Directive 2003/15 EC) have been added to the product. The absence of any of these 26 allergens can not be confirmed, but we attest that they cannot technically occur due to the extraction process used.

The single contents are based on risk estimation which is based on botanical and phytomedicinal reference literature and conclusions by analogy.

Hazardous & CMR Substances

We herewith confirm that, with reference to the confirmation of our raw materials suppliers, we do not add any CMR (Carcinogenic, Mutagenic, Toxic for reproduction) substances graded 1A, 1B or 2 in accordance with the Annex VI of the European Regulation 1272/2008 and its amendments to our product listed below.

Fig Liquid Fruit Extract

The product fulfils the requirement of Article 15 of the European Regulation 1223/2009 and its amendments.

Botanical preparations which contain technically unavoidable traces or impurities of plant constituents listed as CMR in the European Regulation 1272/2008 are not affected by the exclusion listed in Article 15 of the European Regulation 1223/2009.

Animal testing

Our manufacturer confirms that since 1990, our products have not been tested on animals in order to meet the requirements of the Cosmetic Regulation and we will not carry out animal tests in the future to meet the requirements of the Cosmetic Regulation.

We are aware that the individual substances that comprise our products may have been tested on animals in the past, but these tests were not carried out either by or on the request of MADAR.

MADAR! therefore confirms the compliance of our products with the Cosmetic Regulation 1223/2009 concerning the ban on testing in animals in order to meet the requirements of the Cosmetic Regulation.

(the value is not a part of the CofA)

Toxicological Data :

We do not see any danger in using Fig Liquid Fruit Extract in cosmetic agents taking into account the application form, the concentration, the amount used and the frequency of use.

We haven't carried out clinical studies on Fig Liquid Fruit Extract, but according to literature, Propylene Glycol and Ficus carica don't contain potentially toxic compounds and they are safe when used appropriately.

Ficus carica is commonly used in food. Fig fruit has been a typical component in the health-promoting Mediterranean diet for millennia.⁽²⁾

⇒ Human skin irritation :

Propylene Glycol : In a 24-h skin irritation test involving nude mice, there were no reactions to 10% PG. ⁽¹⁾

Draize test results indicated that PG was, at most, a mild skin irritant when applied for 24 h to abraded and intact skin of rabbits. When PG was applied to the skin of guinea pigs and rabbits (guinea pigs and rabbits lack sweat glands) for 48 h using open and closed patches, no reactions were observed. The results of

48 h and 21 day open and closed patch tests involving Gottingen swine (no sweat glands) indicated no reactions to PG.⁽¹⁾

⇒ Mucous membrane irritation :

Propylene Glycol : Propylene glycol did not induce corneal damage in rabbits in the Draize test and was classified as a slight ocular irritant in another ocular irritation study. ⁽¹⁾

⇒ Sensitisation potential :

Propylene glycol : Results were negative for 100% PG in a mouse external ear swelling sensitization test. The results of a GMPT, OET and chamber (Finn chamber) test indicated no sensitization reactions to 70% PG.⁽¹⁾

⇒ Cytotoxicity : No data available

⇒ Phototoxicity : No data available

⇒ Mutagenicity (e.g. Ames Test) :

Propylene glycol : In the Ames test, PG was not mutagenic in strains TA1535, TA1537, TA1538, TA98 and TA100 of Salmonella typhimurium with and without metabolic activation.⁽¹⁾

⇒ Carcinogenicity :

Propylene glycol : Not carcinogenic ⁽¹⁾

⇒ Acute toxicity :

Propylene glycol: Propylene glycol is relatively harmless. Oral LD₅₀ = 21 g/kg body wt in rats ⁽¹⁾

⇒ Inhalation toxicity : No data available

⇒ Chronic toxicity : No data available

⇒ Reproduction toxicity :

Propylene glycol : PG was not teratogenic in female CD-1 mice when administered at a concentration of 10 000ppm on days 8-12 of gestation.⁽¹⁾

Toxicological information about main actives :

No toxicological effect may be expected taking into account the application form, the concentration, the amount used and the frequency of use.

Phototoxic effects are rarely reported when unripe fig fruits or fig drinks are taken and when at the same time the peoples are **exposed to strong UV irradiation**. Also phototoxic effects after topical application of unripe fig juice under sun exposure are reported ⁽⁴⁾

These effects are due to the presence of furocoumarins. These actives are not expected in Fig Liquid Fruit Extract, due to the extraction process, plant quality, quantity and part used: (See enclosed analysis report)
